

The recent order quick action buttons isnt working at all and all the actions aarent working

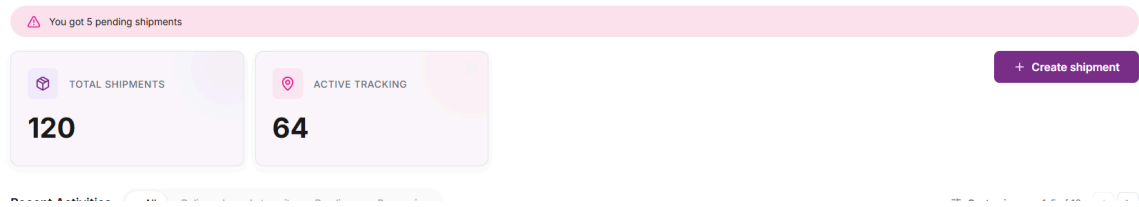

Customize button doesnt work well at all, Also should it be called customized

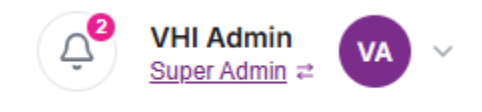

A screenshot of a modal dialog box titled "Export Shipment Data" with a close button (X) in the top right corner. Below the title is a subtitle: "Choose your preferred document format and customize the data fields to include for all shipments." There are two main selection boxes. The first box, "PDF File", is highlighted with a purple border and contains a document icon, the text "PDF File", the subtitle "Best for printing", and a purple checkmark icon. The second box, "CSV/Excel", contains a document icon, the text "CSV/Excel", the subtitle "Best for analysis", and an empty radio button. Below these is a section titled "Data Customization" with three toggle switches, all of which are currently turned on. The toggles are labeled: "Include Price & Billing Details", "Include Shipper/Carrier Information", and "Include Full Itemized List". At the bottom right of the dialog are two buttons: a light purple "Cancel" button and a dark purple "Generate & Download" button.

The home page looks like the one for a user not a an admin, we eeda redefining of the home page, the crate shipment button is not needed at all

Welcome Jane!

This profile an s switching section need to be designed more better as it looks blank

Customer page and shipment

It has issues as the icon and text overlap in the search bar

Settings page

This tad and rounded corner style aren welcome, they are used in the app and is not supposed to be so so three should be suggestion to which kind we can use, more simple and corporate

Settings

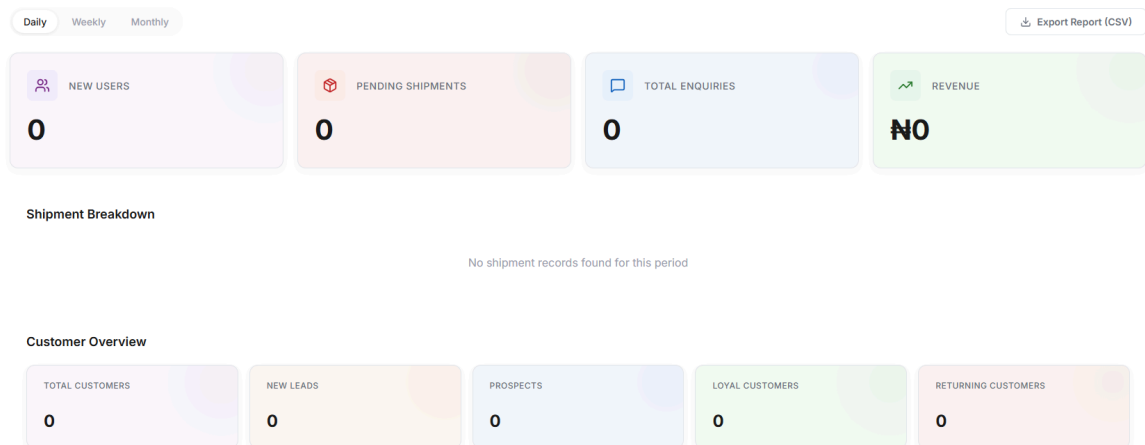

Report page

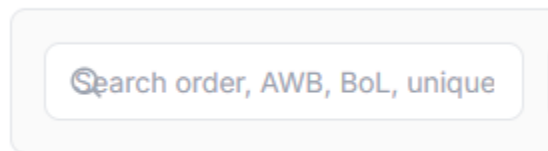

Icon for report side bar is actually wrong and gives the idea of danger

It has a totally different UI which deviates from the main theme, not well laid out and uses too much boxes to layout things which is not accepted, if we don't have data we can have skeleton shades not the box, this is a cooperative app

Reports

In all pages this search bar and text overlap

Shipments (0)

Also the layout on mobile is totally poor and really not good at all

None of the page is responsive at all. I want the AI to go page by page and figure out how to make each page responsive even with high data and less data.
